DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mabuchi (4,005,320).

Mabuchi discloses in figures 1, 10, 11, 15 a motor (1) with a plurality of electrode terminals (negative 11 and positive 13), a case 2 (wherein a portion of the case for the motor forms two electrically separate regions; wherein one of the regions has a negative terminal and the other has the positive terminal disposed on the end of the surface of the motor), and an attachment structure 4 for the purpose of driving the motor; when the motor is connected to a corresponding electrode of the battery (3) through only a conductor member and the other of the electrode terminal of the motor is connected to a corresponding electrode of the battery directly. It would have been an obvious matter of design choice to select a specific shape of a battery to fit the device since such a modification would have involved a mere change in size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. In re Rose, 105 USPQ 237 (CCPA 1995).
